a housing having a ventilating portion allowing a gas to pass there through; and
a pressure sensor inside the housing to detect pressure of a gas supplied to the housing and to generate an output representing the detected pressure;

wherein the output generated by the pressure sensor is used to control the gas pressure of the gas supplied to the housing.

In another embodiment, an electronic digital pressure switch for detecting pressures and generating outputs, comprising:

a contact output that turns ON/OFF according to detected pressures and that allows ON and OFF values to be set;

a display means that digitally displays detected pressures and also digitally displays ON/OFF values of the contact output by switching an operation mode; and

an analog output that changes its output values according to detected pressures.

In another embodiment, an electronic digital pressure switch for detecting a gas pressure and generating an output, comprising:

a housing that has a ventilating portion allowing a gas to pass there through,
wherein the ventilating portion is provided at an upper position of the housing when
detecting the pressure of a gas that is lighter than air, while the ventilating portion is
provided at a lower position of the housing when detecting the pressure of a gas that is
heavier than air.
